

# Subject Index

- A**  
 Alpha-melatonin secreting hormone ( $\alpha$ -MSH)  
   and aging, 47  
   and corticotropin-releasing hormone (CRH), 57  
   antiinflammatory activity of, 137-139  
   in fever and inflammation, 149-150  
   in HIV infection, 153  
 Acetylcholine receptors  
   in myasthenia gravis, 18  
   in Parkinson's disease, 18  
 Acromegaly, 116, 118  
 ACTH  
   and immune system, 292-294  
   and stress, 265-268  
 Adrenergic system, thymus control of, 124-127  
 Aging  
   and  $\alpha$ -melatonin secreting hormone, 47  
   and melatonin, 47  
   and pineal gland, 46-48  
   and thyrotropin-releasing hormone, 46-47  
   and zinc deficiency, 47-48  
   cytokine production in, 299-303  
   conditioning in, immune enhancement by, 283-290  
   melatonin and brain cortex adrenoceptors in, 358-362  
 Aging clock, 46-48  
 AIDS  
   dementia complex, 178  
   intravenous immunoglobulins in, 179  
   long-term survival in, 185  
 Alcoholic syndrome, anti-brain autoantibodies in, 17  
 Alprazolam in HIV infection, 180  
 Alzheimer's disease, anti-brain autoantibodies in, 17  
 Amygdala, dopamine D1 receptors in, and immunity, 316-321  
 Anaphylactic shock-induced conditioned taste aversion, 25-27  
 Anorexia nervosa, 267-268  
 Anti-brain antibodies, 12-13  
 Anti-brain autoantibodies in immunoneurologic and immunopsychiatric diseases, 16-17  
 Antigenicity between brain and thymocytes, 2-3  
 Antimicrobial activity of nitric oxide, 39-40  
 Anxiety disorders, 267  
 Arthritis  
    $\alpha$ -MSH as modulator of, 139-142  
   and interleukin-1 receptor antagonist, 151  
   Autoantibodies against S100 protein and neuron-specific enolase, 17  
   Aversive stimulus, 27  
**B**  
 BAT. See Brown adipose tissue  
 Behavior and stress, 217, 252-261  
   and neuroimmunomodulation, 252-261  
 Behavioral lateralization in brain, 271-279  
 Behavioral modulation of immunity, 25-29  
 Bernardi-Comsa preparation, 109  
 Beta-adrenergic receptors  
   and  $\alpha$ -MSH, 144  
   effect of thymic extract on, 124-127  
 Beta-endorphin, 82, 83  
 Brain  
   and behavioral lateralization, 271-279  
   and immune system, 316-321  
   cortex, thymic extract and, 124-127  
   interleukin-1 activation in, 338-356  
   interleukin-1 receptors in, 324-334  
   lesioning and immune response, 7-10  
   magnetic fields, and immunity, 10-12  
   stimulation and immune response, 7-10  
 Bromocriptine as inhibitor of prolactin production, 102  
 Brown adipose tissue, 4-6  
**C**  
 Cachectin. See Tumor necrosis factor  
 Calcitonin gene-related peptide in thymus, 129-134  
 Cancer  
   and stress, 234-241  
   interleukin-2 and melatonin in, 192-194  
 Catecholamines as neurotransmitters in stress, 253  
 Cells  
   natural killer cells in HIV infection, 186  
   Th1 and Th2 cells in HIV infection, 186  
   cloned Th1 cell line for malaria, 40  
 Cellular immune self-tolerance, 86  
 Central nervous system  
   and immunity, 7-10  
   HIV infection of, 178  
 Cerebral asymmetry and immunity, 8-10  
 Cloned Th1 cell line for malaria, 40  
 Conditioned stimulus, 25-27, 284  
 Conditioning, immune enhancement by, in senescence, 283-290  
 Coping modes in long-term survivors of AIDS, 187-189  
 Corticotropin-releasing hormone and cytokines, 56-58  
 Cortisol and stress, 265-267

- Cryptocrine signaling in thymus network, 85-92
- Cyclophosphamides in cancer and stress, 237-240
- Cytokine antagonists  
in endotoxemia, 153  
in infection, 152-153  
in inflammatory disorders, 154
- Cytokine production in aging, 299
- Cytokine-receptor interactions and histamine, 138
- Cytokines. *See also* Interferon; Interleukins  
and fever, 162-163  
and histamine in inflammation, 138  
and human immunodeficiency virus infection, 152-153  
and hypothalamus-pituitary-adrenal axis, 226-229  
and LHRH release, 58-59  
and lipopolysaccharides in HIV infection, 174-181  
and nitric oxide synthesis, 41-42  
and the anterior pituitary gland, 54-56  
and the hypothalamus, 51-52  
and the pituitary, 60  
and their receptors in neuroendocrine system, 294  
as immunomodulators in aging, 300  
corticotropin-releasing hormone-releasing action of, 56-58  
in anterior pituitary gland, 51  
in autoimmune endocrine diseases, 87  
in endocrine system, 50-60  
in infectious and inflammatory disorders, 149-155  
interleukin-1, 294  
in brain, 338-356  
interleukin-1 receptors in brain and pituitary, 324-334  
interleukin-2  
and pain, 244-251  
and thymosin  $\alpha_1$  in aging, 299-300  
in immunity, 191  
interleukin-4  
and nitric oxide synthesis, 41-42  
and thymosin  $\alpha_1$  in aging, 299-300  
interleukin-10 and nitric oxide synthesis, 41-42  
tumor necrosis factor receptor, 151-152
- D**epression, major, 265-267
- Dexamethasone in stress, 327
- Diabetes, 117, 119, 120  
and streptozocin, 40-41
- Distress and immunity, 204-209
- Dopamine D1 receptors in amygdala and immune response, 316-321

Drugs, antitumor, and stress, 234-241

**E**mbryo, magnetic fields, and immunity, 10-12  
neuroimmunoendocrine interactions in, 2-3

Endocrine system  
and immune system during stress, 216  
cytokines in, 50-60  
evolutionary aspects of, 91-92  
thymus, 108, 115-121

Endometriosis, estradiol and natural killer cells in, 197-202

Endotoxemia and  $\alpha$ -MSH, 153

Endotoxins, cytokines, and neuroimmune networks, 174-181

Enkephalins and immunity, 20-21

Epilepsy, autoimmune phenomena in, 16

Epilogue, 364

Epithelium of thymus, 101-102

Estradiol and endometriosis, 197

Experimental allergic encephalomyelitis, 14-16

**F**ever, neuromodulation of, 162-171

**G**amma/delta T-cell receptor antigens in central nervous tissue, 305-313

Gamma interferon  
and  $\alpha$ -MSH, 150  
and the anterior pituitary gland, 55-56  
and the hypothalamus, 53

Gastric ulcers, stress-induced, 254

Gastrointestinal tract, neuroimmunomodulation in, 64-69

Glucocorticoids  
and immune system, 225-226  
and stress, 87

**H**eat lesions, stress-induced, 254

Heat-shock protein 70 antigens in central nervous tissue, 305-313

Hippocampus, interleukin-1 production after LPS, 331

Histamine and cytokines in inflammation, 138

Histones  
H1, H2A, H2B, and H3, 110  
H2A and H2B, 109  
hypophyseotropic activity of, 110-111

HIV infection, 152-153, 174-181

HIV-seropositive persons, prolonged asymptomatic states in, 185-189

Homeostasis, 108  
and nitric oxide, 39-44

Homeostatic thymus hormone, 108-109

Hormones

- developmental, 115
- estradiol and endometriosis, 197
- homeostatic thymus hormone, 108-109
- isolated growth hormone deficiency, 117-118
- pineal melatonin, 191
- thymulin, 101, 102, 115, 116, 119-121
- synthetic, 112
- Human immunodeficiency virus. *See* HIV
- Hydroxyl radical and melatonin during senescence, 47
- Hyperprolactinemia, 119
- Hypothalamic-pituitary-adrenal axis in neuropsychiatric disorders, 263-268
- Hypothalamus
  - and cytokines, 51-52
  - anterior, preoptic area of, and fever, 162
  - interleukin-1 in, 294
- Hypothalamus-pituitary-adrenal axis and immune system, 223-230
- I**  
**ICI 174864**, immunomodulating activity of, 23
- Idiopathic diabetes insipidus, 90
- IGF-1 and thymic endocrine activity, 120
- Immune enhancement by conditioning in senescence, 283-290
- Immune system
  - and hypothalamus-pituitary-adrenal axis, 223-230
  - and neuroendocrine system, communication between, 292-295
  - and stress, 212-215
  - as sensory organ, 295
  - microenvironment, 1-2
- Immunity
  - and brown adipose tissue, 4-6
  - and central nervous system, 7-10
  - and cerebral asymmetry, 8-10
  - and dopamine D1 receptors in amygdala, 316-321
  - and magnetic fields, 10-12
  - and nucleus locus ceruleus, 7-10
  - and pineal gland, 6-7, 46-48
  - and stress, 27, 28
  - asymmetrical brain modulation of, 272-273
  - behavioral modulation of, 25-29
  - cell-mediated, in immunoneurologic and immunopsychiatric diseases, 17-19
  - enkephalins and, 20-21
  - stress, and distress, 204-209
- Immunobiology
  - of lithium, 19-20
  - of nitric oxide, 20
- Immunohistochemistry of central nervous tissue, 305-306, 310
- Immunologic stimuli
  - bacterial lipopolysaccharide, 39
  - gamma interferon, 39
  - migration inhibitory factor, 39
  - tumor necrosis factor-alpha, 39
- Immunomodulation
  - and ICI 174864, 23
  - and methionine-enkephalin, 20-21
  - and MR 2034, 24-25
  - and naltrexone, 23
  - asymmetrical, 8-10
  - by melatonin, 191
  - enkephalin-induced, 20-21
  - with prolactin, 100-104
- Immunoneurologic diseases, 13-17
- antibrain autoantibodies in, 16-17
- Immunopotential and brown adipose tissue, 6
- Immunopsychiatric diseases, 13-17
- antibrain autoantibodies in, 16-17
- Immunosuppression and brown adipose tissue, 6
- Infection
  - cytokines in, 149-155
  - rabies virus, and interleukin-1 receptors, 328-330
- Inflammation
  - cytokines in, 149-155
  - neuropeptide  $\alpha$ -MSH and, 137-145
- Insulin-dependent diabetes mellitus and cytokines, 87
- Interferon in NK cell activity in endometriosis, 197, 201
- Interleukin-1, 294. *See also* Cytokines; Interferon
  - activation in brain, 338-356
  - and the anterior pituitary gland, 54
  - and the hypothalamus, 51-52
  - receptor antagonist, 150-151
  - receptors in brain and pituitary, 324-334
- Interleukin-1 $\alpha$  and LHRH release, 59
- Interleukin-2, 83
  - and anterior pituitary gland, 55
  - and calcitonin gene-related peptide, 131
  - and corticotropin-releasing hormone, 56-58
  - and hypothalamus, 53
  - and melatonin in cancer, 192-194
  - and natural killer cell cytotoxicity, 76-79
  - and pain stimulation, 244-251
  - and thymosin  $\alpha_1$  in aging, 299-300
  - in endometriosis, 197, 201
  - in NK cell activity in endometriosis, 197, 201
- Interleukin-4
  - and nitric oxide synthesis, 41-42
  - and thymosin  $\alpha_1$  in aging, 299-300

- Interleukin-6  
and anterior pituitary gland, 51, 55  
and corticotropin-releasing hormone, 57  
and hypothalamus, 52
- Interleukin-10 and nitric oxide synthesis, 42
- Intestinal peptide receptors on immune cells, 65
- Isolated growth hormone deficiency, 117-118
- L**-NMMA and diabetes, 40-41
- Leishmaniasis and nitric oxide, 39-40
- Leucine-enkephalin, 20-21
- Lewis lung carcinoma and stress, 237
- LHRH release and nitric oxide synthase, 58
- Lipopolysaccharides  
and cytokines in HIV infection, 174-181  
and interleukin-1 receptors, 326-327  
inhibit nitric oxide synthesis, 43
- Lithium, immunobiology of, 19-20
- Locus ceruleus, nucleus, and immunity, 7-10
- Low T3 syndromes, 116, 119
- Lymphocytes  
and neurons, antigenic correlation between, 2-3  
calcitonin gene-related peptide binding sites on, 130
- Lymphokines. *See also* Cytokines  
and natural killer cell regulation, 73  
interferon in endometriosis, 197, 201
- M**agnetic fields, brain, and immunity, 10-12
- Malaria and nitric oxide, 39-40
- Manic-depression  
and lithium, 19-20  
anti-brain autoantibodies in, 17
- Melatonin  
and senescence, 47  
in regulating brain cortex adrenoceptors in aging, 358
- Memory and anti-brain antibodies, 12-13
- Methionine-enkephalin. *See also* Opioid peptides  
and immunomodulation, 20-21  
in experimental allergic encephalomyelitis, 14-16
- Metipranolol  
in preventing heart lesions, 255  
in stress ulcers, 259
- Monoaminergic metabolism of brain, stress-induced changes in, 275
- Morphine in cardiac infarction and gastric ulcers, 255
- MR 2034, immunomodulating activity of, 24-25
- Myocardial infarction, cytokines during, 154
- N**altrexone, immunomodulating activity of, 23
- Natural killer (NK) cell activity  
and lymphokines, 73  
conditioning in, 283  
in endometriosis, 197  
in spleen, 317-321
- Natural killer cytotoxic assay, 74-75
- Neuroendocrine and immune systems, communication between, 292-295
- Neuroendocrine axis and behavioral stress, 216-221
- Neuroendocrine control, thymic epithelium in, 101-102
- Neuroendocrine-immune interactions, 85-86, 292-295
- Neuroendocrineimmunomodulation, 81-83
- Neuroendocrine system  
asymmetrical brain modulation of, 274  
diseases of, 115-121
- Neurohypophyseal peptide receptors, 89
- Neuroimmunomodulation, 1-29, 81-83  
behavior, and stress, 252-261  
in gastrointestinal tract, 64-69
- Neuroimmunoregulation, nitric oxide in, 39-44
- Neuromodulation of fever, 162-171
- Neuron and lymphocyte, antigenic correlation between, 2-3
- Neuropeptide receptors on immune cells, 65-66
- Neuropeptides  
 $\alpha$ -MSH in fever and inflammation, 149-150  
 $\alpha$ -MSH in inflammation, 137-145  
and inflammatory processes, 88  
and intestinal inflammation, 68  
and mucosal immune function, 66-67  
calcitonin gene-related peptide in thymus, 129-134
- Neurophysin, 90
- Neuropsychiatric disorders, 263-268
- Nitric oxide  
antimicrobial activity of, 39-40  
immunobiology of, 20  
in bone marrow transplantation, 41  
in neuroimmunoregulation, 39-44  
in rheumatic diseases, 41  
pathologic effect of, 40-41
- Nitric oxide synthase (NOS) and cytokines, 56
- Nitric oxide synthesis  
by a feedback mechanism, 43  
by cytokines, 41-42  
inhibition of, by lipopolysaccharides, 43

Norepinephrine and LHRH release, 59  
Nucleoprotein complexes, hypophyseotropic activity of, 110-111

**O**ntogeny, pituitary-thyroid hormones during, 73-79

Opioid peptides, 20-21

Opioid receptors in enkephalin-induced immunomodulation, 21-25

*Organum vasculosum laminae terminalis* and fever induction, 162

**P**ain and interleukin-2 production, 244-251  
Paranoia, anti-brain autoantibodies in, 17  
Parkinson's disease and cell-mediated immunity, 18

Peptides

calcitonin gene-related, in thymus, 129-134

neuroendocrine, and receptors in immune system, 292-295

Phenomenology, 1

Physiology

intrathymic production of prolactin, 103

of thymus, 101-102

Pineal gland

and immunity, 6-7

in reproduction, immunity, and aging, 46-48

Pineal-opioid system and immunoinflammatory responses, 191-195

Pituitary gland

cytokines in, 51

hormones, 109

interleukin-1 receptors in, 324-334

Pituitary-thyroid hormones and natural killer cell activity, 73

POA. *See* Hypothalamus

Polymerase chain reaction of  $\delta$  TCR antigen, 307, 310

Polypeptides, HTH<sub>a</sub> and HTH<sub>b</sub>, 109

Prolactin, 82, 100-104

as modulator of thymic epithelium, 102

messenger RNA, 104

receptors, 103

Proopiomelanocortin (POMC) synthesis, 81

Propranolol in migraine without aura, 179

Protamine, 110

Protein kinase C and nitric oxide synthesis, 42

Psychoimmunology, 204-205

Psychological factors in cancer and stress, 234-241

Psychoneuroimmunologic findings in HIV infection, 186-189

**R**azoxane in cancer and stress, 236

Reinforcement immunity, 27-29

Reserpine in experimental allergic encephalomyelitis, 15

Rheumatoid arthritis, cytokines in, 154

**S**100 protein in experimental epilepsy, 16-17

Schizophrenia, anti-brain autoantibodies in, 17

Senescence. *See* Aging

Senile dementia, anti-brain autoantibodies in, 17

Septic shock,  $\alpha$ -MSH to improve survival in, 142

Somatostatin

and mucosal immune function, 67

receptors on immune cells, 65

Spleen cells

and pain stimulation, 244-251

proliferation of, in aging, 299

Spleen, natural killer cell activity in, 317-321

Splenocytes, calcitonin gene-related peptide innervation in, 130

Streptozocin and diabetes, 40-41

Stress

and antitumor drugs, 234-241

and glucocorticoid secretion, 87

and immunity, 27, 28, 212-215

behavior, and neuroimmunomodulation, 252-261

behavioral, and neuroendocrine axis, 216-221

distress, and immunity, 204-209

interleukin-1 receptors after, 327-328

maternal deprivation, 27

overcrowding, 27

preweaning handling, 27

sound stress, 27

Studies

natural killer cell assay, 198

polymerase chain reaction, 307-310

triple labeling flow cytometry, 103

Substance P

and mucosal immune function, 66-67, 69

in neuromodulation of fever, 162-171

receptors on immune cells, 65

**T** cells. *See also* Thymocytes

and calcitonin gene-related peptide, 131

CD4<sup>+</sup>, in HIV-seropositive persons, 185-189

differentiation in thymus, 100-103

in HIV infection, 186

pain stimulation, and interleukin-2, 244

tolerance of neuroendocrine functions, 85-92

- Taste aversion, conditioned, 25-27
- Thymic epithelial cells  
and neuropeptides, 89  
hypophyseotropic activity of, 111-112
- Thymic extract (TME), 124-127
- Thymic hormone zinc-unbound, 120
- Thymic nurse cells, 89  
reconstitution of, 102
- Thymic oxytocin-like peptide, 91
- Thymic peptides, 53
- Thymocytes. *See also* T cells  
and calcitonin gene-related peptide, 129-134  
and thymic epithelial cells, interactions of, 102
- Thymosin  $\alpha_1$   
and anterior pituitary gland, 56  
and corticotropin-releasing hormone, 56  
and hypothalamus, 53
- Thymulin, 101, 102, 115, 116, 119  
synthetic, 112
- Thymus  
calcitonin gene-related peptide in, 129-134  
endocrine function of, 115-121  
network, cryptocrine signaling in, 85-92  
physiology of, 101-102  
-pituitary axis, 108-113  
prolactin-mediated cellular interactions in, 100-104  
T-cell differentiation in, 100-101  
Thyroid-stimulating hormone and natural killer cell cytotoxicity, 76-79  
Thyrotropin-releasing hormone and aging, 46-47  
Transforming growth factor-beta and nitric oxide synthesis, 42  
Triple labeling flow cytometry, 103  
Tumor necrosis factor  
and anterior pituitary gland, 54-55  
receptor, 151-152  
-alpha, release of, in HIV infection, 178  
(cachectin) and hypothalamus, 52  
Tyrosine kinase and nitric oxide synthesis, 42
- U**nconditioned stimulus, 25-27, 284
- V**asoactive intestinal peptide and mucosal immune function, 67
- Z**idovudine in AIDS, 179
- Zinc  
deficiency and aging, 47-48  
in biologic activity of thymulin, 116, 120-121
